

Abstract of the Disclosure

The present invention relates to a stable liquid preparation comprising a camptothecin derivative which is prepared by binding a compound of the formula [I]:

wherein  $R^1$  is a substituted or unsubstituted lower alkyl group,  $X^1$  is a group of the formula:  $NHR_2$  ( $R_2$  is a hydrogen atom or a lower alkyl group) or a hydroxy group and Alk is a straight or branched chain alkylene group optionally interrupted by an oxygen atom, and a polysaccharide having carboxyl groups via an amino acid or a peptide, or a pharmaceutically acceptable salt thereof, which is adjusted to pH 5-8, or a stable pharmaceutical composition produced by lyophilizing said liquid preparation.
